Business Insight

- Largest funnel leakage occurs at the Reply → Qualification stage (71.2% drop-off).
- Qualified leads convert at 45.5%, making qualification quality the strongest revenue indicator.
- 72.5% sender overlap and 47.4% CRM duplication expose coordination and reporting risks.

Sender Overlap Impact Analysis

Operational Risk Analysis

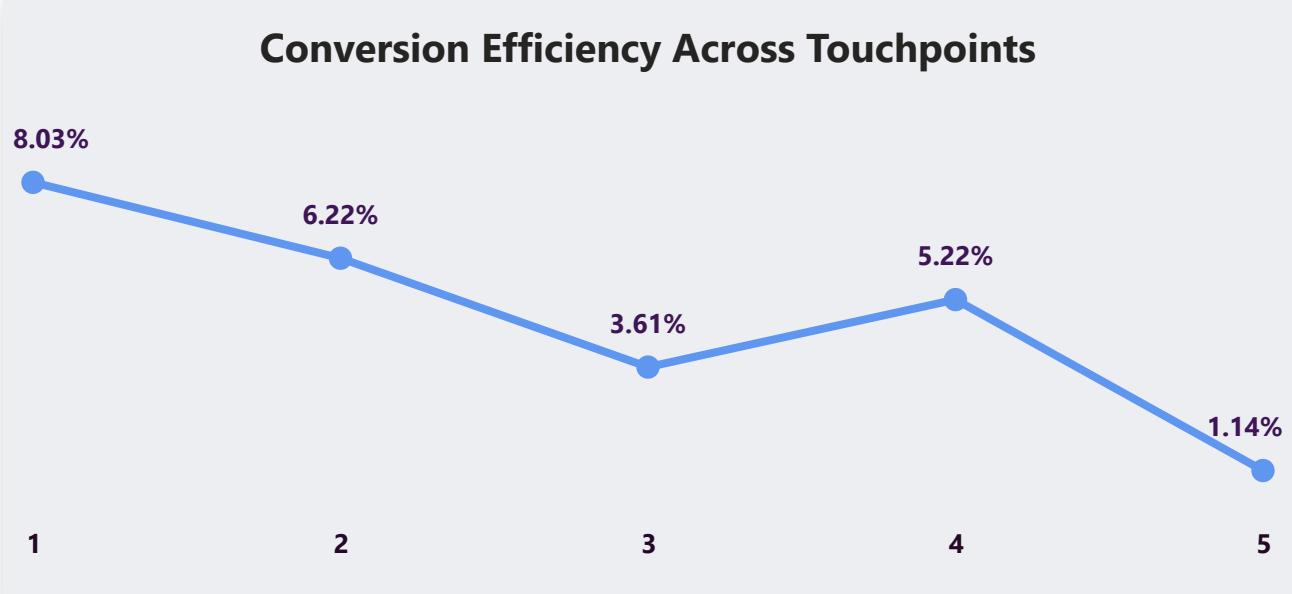

Performance Comparison Matrix

Category	Reply Rate	Qualified Rate	Conversion Rate
Single Sender	31.10%	28.42%	4.21%
Multi Sender	30.31%	28.87%	3.94%

Executive Interpretation

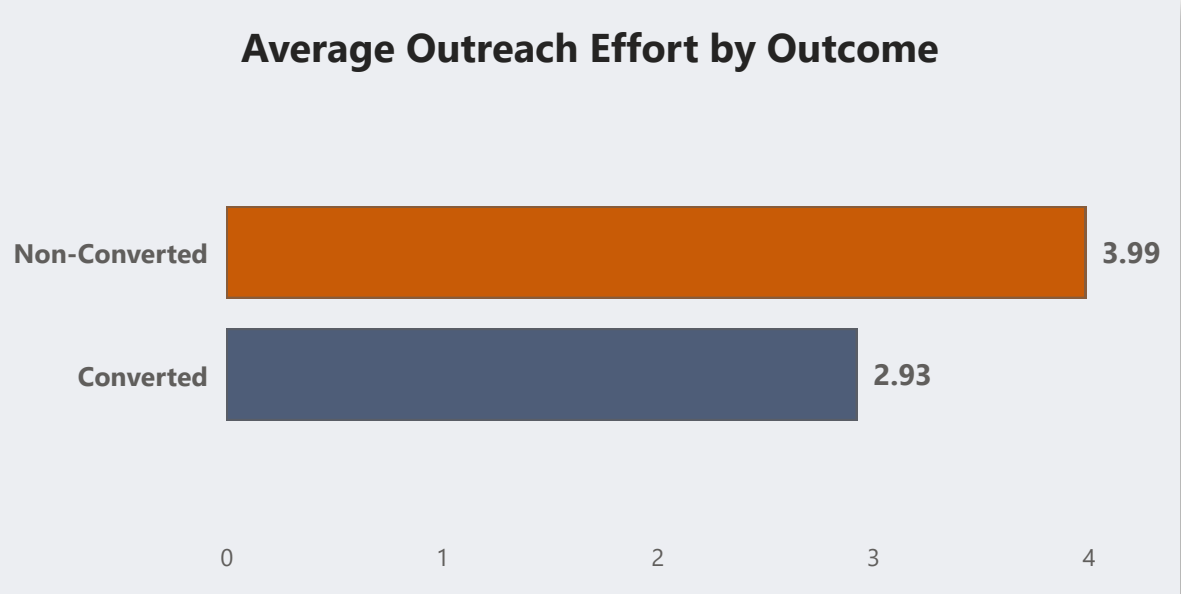

- 72.5% sender overlap exists, but conversion differs by only 0.27 percentage points.
- Sender overlap is primarily an operational coordination issue rather than a measurable performance issue.
- CRM deduplication and email-level lead ownership would improve reporting reliability and outreach coordination.
- 47.4% CRM duplication is the likely driver of fragmented ownership and duplicate outreach.

Outreach Efficiency

Efficiency Insight

- Conversion performance is strongest at the first touchpoint (8.0%).
- Touchpoint 4 shows a minor conversion uptick within a smaller journey population, indicating isolated late-stage engagement rather than a consistent sequence trend.
- Touchpoint 5 carries the highest journey volume but converts at only 1.1%, indicating diminishing returns from extended outreach sequences.

Outreach Effort Insight

- Converted journeys required fewer touchpoints (2.93) than non-converted journeys (3.99).
- Additional outreach effort was concentrated on journeys that ultimately did not convert.
- Non-converted journeys required 36% more outreach effort without proportional business outcomes.

Conversion Rate by Response Stage

Identity Exposure Comparison

Identity Type	Average Campaign Exposure	Sender Overlap Rate
Duplicate Identity	4.88	96.94%
Single Identity	2.14	34.87%

KEY INSIGHTS

- Direct Requirement (51.6%) and Meeting Interest (40.5%) convert significantly higher than all other response stages (<1%).
- Duplicate identities experience 96.9% sender overlap and receive 4.88 average exposures versus 2.14 for single identities.
- Recommendation -> Prioritize identity-level deduplication and intent-based outreach.
